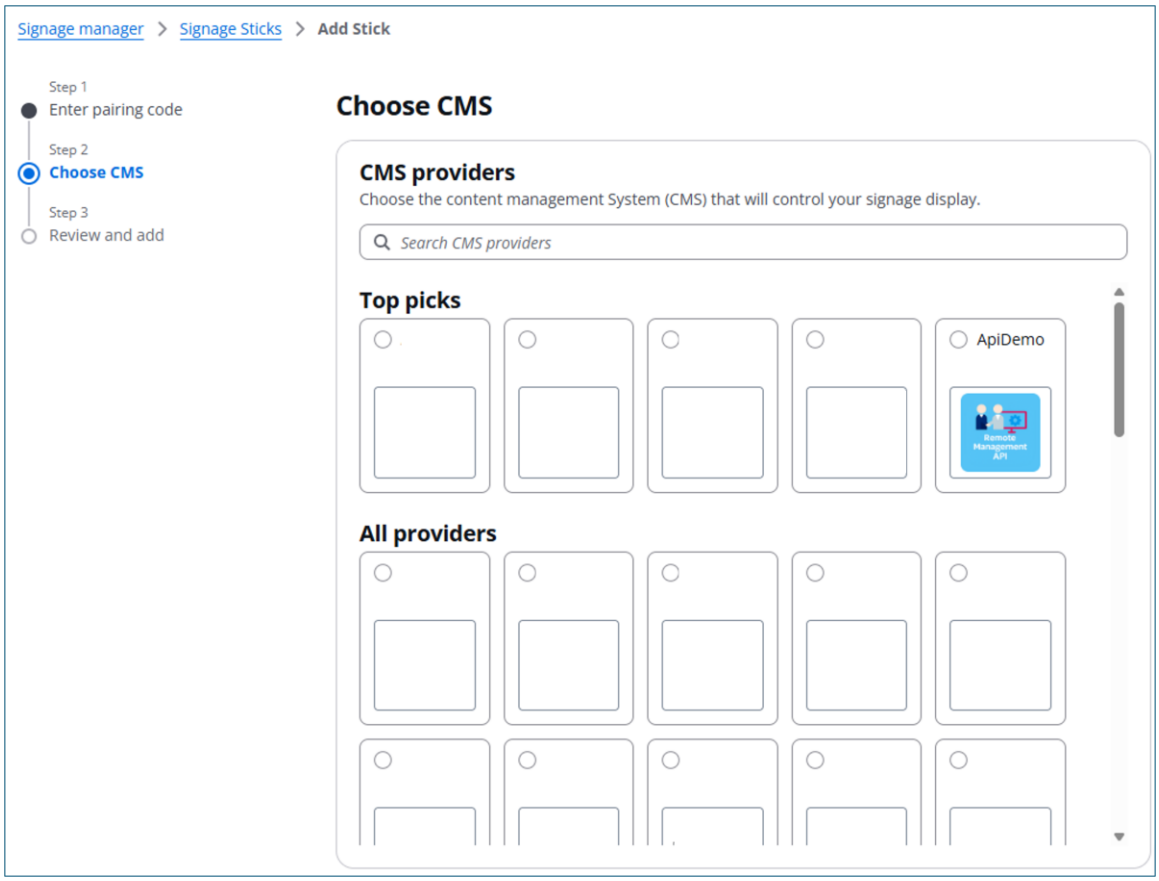
API Demo App

As part of the Remote Management API, ADS provides a Demo app that exercises all available API calls. The Demo app is available as a CMS option when you provision an Amazon Signage device in the demo environment. To update your device to API-capable firmware first, follow steps 1 to 3 of the Remote Management API Testing Preparation document.

After the OS update completes, factory-reset the device and provision it again at https://demo.signage.amazon.com, selecting ApiDemo from the CMS list. Repeat this before each test cycle so that the device installs the latest Demo app.



Selecting ApiDemo in the CMS list
